# EZ-Care2
Information Sheet

Overview

EZ-Care2 is a multi-user, Windows-based child care center management system that allows Child Day Care staff to track and report on enrollment, medical and emergency information. It is an upgrade for the discontinued software previously used by Child Day Care.

The EZ-Care2 system meets a business need for the Child Day Care Division and serves the public interest through accurate, timely and secure records keeping practices.

The project was coordinated by the IT Department with the goal of making the software available concurrently at the South Road Child Day Care center and the High Street Family Resources Center so staff always has ready access to information. The software implementation involved the migration of data from the older system into EZ-Care2 and the coordination of administrative use of each system during the migration.

Highlights

- Central storage of information accessible from South Road and High Street facilities
- Generate monthly reports for State of Connecticut
- Can manage information on children including emergency contacts, status and enrollment details
- Stores information related to families, tuition and schedule
- Store, lookup, and report on food reimbursement and attendance information
- Tracking of fee collections
- Parent billing available for both day care locations

Interaction with Other Systems

- EZ-Care2 runs on a centralized Windows Server 2003 with Terminal Services
